

# Quality, Environmental and Energy Policy

---

## Quality Policy and Mission

**Quality Policy:** Supply products and services in full compliance with relevant specifications. The company's quality management system is maintained to continually improve our processes and products to the highest value according to our customer's expectation.

**Quality Mission:** Design and supply products of high quality through targeting zero defects deliveries.

## Environmental and Energy Policy

Minimize adverse environmental impacts by advancing environmentally compatible product design and behaving in an environmentally responsible manner. Environmental protection, including prevention of pollution by volatile organic compounds as well as minimizing our Greenhouse Gas emissions is our commitment.

We will achieve this by:

- Maintaining a certifiable environment and energy management system in accordance with international standards (ISO14001, ISO50001).
- Continually improving the environmental and energy performance throughout the entire product life cycle.
- Selecting key subcontractors who are ISO14001 and ISO50001 certified.
- Meeting or exceeding environmental legal requirements and relevant regulations.
- Increasing awareness and knowledge of environment and energy issues throughout the organization, so that it becomes a natural part of the decision making process.
